

Maximizing Algebra II Performance

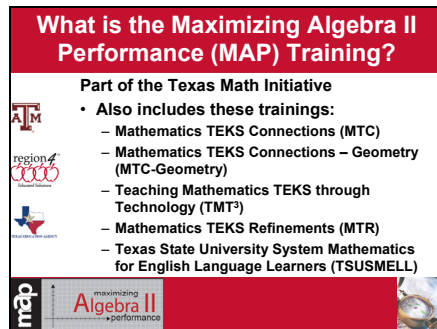

Administrator Overview

Slide 1

Slide 2

Short description of the Texas Math Initiative. Each of the trainings has a specific purpose yet is related to the others. MTR focuses on the refinements in the TEKS. TMT³ focuses on the judicious use of technology to enhance mathematical understanding. TSUSMELL focuses on resources to support English Language Learners. MTC focuses on making conceptual to abstract connections within and across the TEKS. MTC-Geometry is a continuation of the MTC project and focuses on the conceptual connections within Geometry and to other courses. MAP is a continuation of the MTC project and focuses on the conceptual connections within Algebra II and to other courses.

Slide 3

MAP

Maximizing Algebra II Performance (MAP) uses a functions-based approach to the teaching and learning of the Algebra II TEKS. This professional development extends and enriches current instructional practice in order to facilitate robust learning for all students enrolled in Algebra II. Content-based and instruction-based connections will be explored within a strand and between strands of the TEKS. The professional development includes:

Logos: ATM, region of Central Texas, Texas Department of Education, maximizing Algebra II performance

Slide 4

MAP

- learning opportunities that promote conceptual understanding and procedural fluency related to functions outlined in the Algebra 2 TEKS
- tools to connect multiple representations of parent functions to build and solidify student understanding of functions

Logos: ATM, region of Central Texas, Texas Department of Education, maximizing Algebra II performance

Slide 5

MAP

- intentional questioning strategies to facilitate modeling, organizing, and generalizing understandings related to mathematical and real-world contexts
- classroom-ready lessons that utilize the 5E instructional model to the Algebra 2 TEKS explored in the professional development

Logos: ATM, region of Central Texas, Texas Department of Education, maximizing Algebra II performance

Slide 6

Governors Initiative

High School Success and College Readiness

Four-by-four curriculum: High School graduation requirements include four courses in each subject of the foundation curriculum (English Language Arts, math, science, social studies).

Business and government entities agree that college readiness in high school must be improved.

Slide 7

Why 4 Years of Mathematics?

- Changing nature of the workforce.
- Fastest growing jobs require some education beyond high school.
- Employers express concern about the lack of essential skills among students.

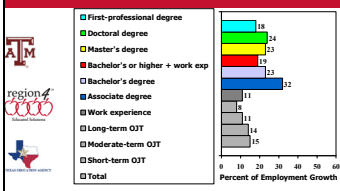

Preparing America's Future High School Initiative, Hans K. Meador, Deputy Assistant Secretary, Office of Vocational and Adult Education, United States Department of Education, February 29, 2004

Point out outsourcing and the impact of technology.

Slide 8

Fastest Growing Jobs Require Some Education Beyond High School

Category	Percent of Employment Growth
First-professional degree	18
Doctoral degree	24
Master's degree	23
Bachelor's or higher + work exp	29
Bachelor's degree	33
Associate degree	11
Work experience	6
Long-term OJT	11
Moderate-term OJT	14
Short-term OJT	15
Total	100

Preparing America's Future High School Initiative, Hans K. Meador, Deputy Assistant Secretary, Office of Vocational and Adult Education, United States Department of Education, February 29, 2004

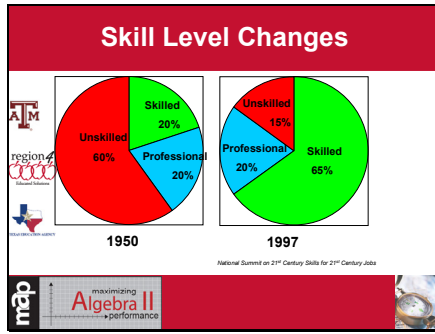

Note top categories require an associate degree and above.

Slide 9

Note the vast disparity between a high school diploma and a bachelors degree.

Slide 10

Note the data, ask participants to conjecture as to the percentages now.

Slide 11

Preparation Matters

- Strongest predictor of college completion -
- a rigorous and challenging high school course of study.
- Strongest predictor is mathematics.
- the higher the level of mathematics completed in secondary school, the stronger the continuing influence on bachelor's degree completion.

Answers in the Text Box by Clifford Adelman, June 1999

Slide 12

Preparation Matters

Of all pre-college curricula, the highest level of mathematics one studies in secondary school has the strongest continuing influence on bachelor's degree completion. Finishing a course beyond the level of Algebra 2 (for example, trigonometry or pre-calculus) more than doubles the odds that a student who enters postsecondary education will complete a bachelor's degree.

Answers in the Field Box by Clifford Adelman, June 1999

Logos: ATM, region of CIOO, Texas Education Agency, maximizing Algebra II performance.

Slide 13

Algebra II – The New Gatekeeper

Algebra II has been identified as the baseline course for preparing students for college level science, technology, engineering and mathematics.

- A core part of student achievement in *No Child Left Behind*
- Required by 37 states for entry into their university system

Logos: ATM, region of CIOO, Texas Education Agency, maximizing Algebra II performance.

Slide 14

Algebra II – The New Gatekeeper

Students are not taking or failing this course

- Nationally, about one-third of all high school students successfully (grade of C or better) complete algebra II
- Only four states require Algebra II for high school graduation

Logos: ATM, region of CIOO, Texas Education Agency, maximizing Algebra II performance.

Historically, Algebra II has had a high failure rate. This high rate has generally been viewed as acceptable. Why?

Slide 15

Algebra II – The New Gatekeeper

Current approaches to help students matriculate into Algebra II have not been successful

- Teach content using the same approach, an approach that has already failed these students
- Widespread teacher and student dissatisfaction

What is the typical approach to teaching Algebra II?

Slide 16

Mathematical Proficiency

College readiness requires mathematical proficiency.

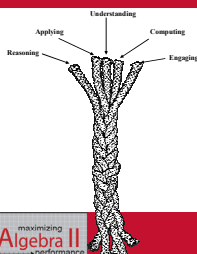

- What is mathematical proficiency?

Brainstorm with participants.

Slide 17

Mathematical Proficiency

The National Research Council describes mathematical proficiency as a rope with several strands. No one strand is more important than the other.

Slide 18

Mathematical Proficiency

- **Understanding:** Comprehending mathematical concepts, operations, and relations – knowing what mathematical symbols, diagrams, and procedures mean.
- **Computing:** Carrying out mathematical procedures, such as adding, subtracting, multiplying, and dividing numbers flexibly, accurately, efficiently, and appropriately.

Slide 19

Mathematical Proficiency

- **Applying:** Being able to formulate problems mathematically and to devise strategies for solving them using concepts and procedures appropriately.
- **Reasoning:** Using logic to explain and justify a solution to a problem or to extend from something known to something not yet known.

Slide 20

Mathematical Proficiency

- **Engaging:** Seeing mathematics as sensible, useful, and doable – if you work at it – and being willing to do the work.

Slide 21

What Do We Need To Do Differently?

If we (mathematics educators) continue to do what we are doing we will continue to get the results we have been getting.
Is that acceptable?
What are the implications for all students taking a rigorous Algebra II?

Logos: ATM, region of 0000, Texas Education Agency, maximizing Algebra II performance, map.

How does instruction need to change so that all students can become mathematically proficient in Algebra II?

Slide 22

Processing Model

The graphic that follows is a model for using multiple representations to make mathematical connections. Conceptual development takes place in a meaningful context. Understanding is developed by moving among the three activities of concrete modeling, organizing and generalizing.

Logos: ATM, region of 0000, Texas Education Agency, maximizing Algebra II performance, map.

Slide 23

Processing Model

Typically, understanding is developed by starting with a concrete model and moving to organizing then generalizing or generalizing directly. In order to make justifications one typically moves back to either modeling or organizing. The key to student understanding is the discourse that takes place to formalize the relationships between the categories.

Logos: ATM, region of 0000, Texas Education Agency, maximizing Algebra II performance, map.

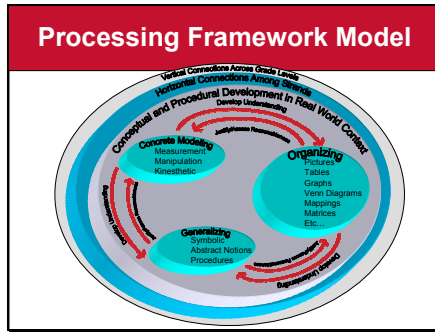

Slide 24

Processing Framework Model

Once a concept is developed it can be applied in different contexts across strands within a grade level or courses. Finally it is connected vertically across grade levels or courses.

maximizing
Algebra II
→ performance

Slide 25

Slide 26

Rigor vs. Complexity of Content

Bloom's Taxonomy

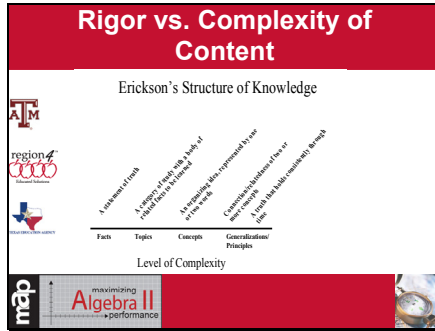

Level of Difficulty	Evaluate	To evaluate, make judgments based on criteria or standards, check based on data
	Synthesize	To create, generate, design, produce
	Analyze	To analyze, differentiate, compare
	Apply	To apply, execute with familiar tasks, implement with unfamiliar tasks
	Understand	To understand, interpret, explain, exemplify
	Remember	To remember, identify, recall

Adapted from: W. G. Anderson, D. R. Krathwohl, B. R. Bloom, & D. L. Maslach (2001) *Taxonomy of learning objectives*. New York: Longman.

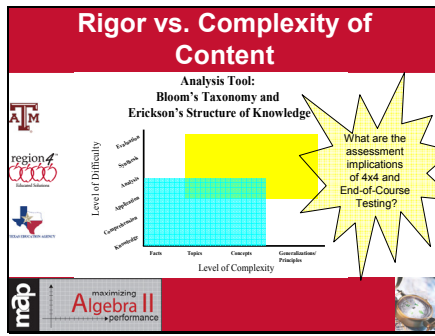

maximizing
Algebra II
→ performance

Rigor is key but balance is critical.

Slide 27

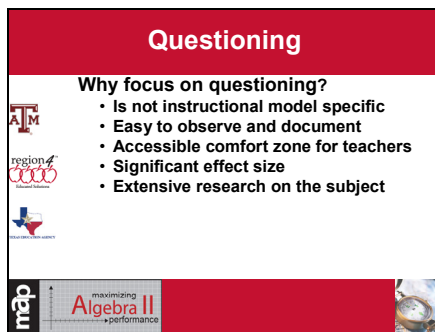

Slide 28

Assessments have become much more conceptual in design. Whether the assessment is TAKS, SAT, or AP exams, questions are becoming more sophisticated. This requires a higher level of problem-solving on the part of students.

Slide 29

The discourse that occurs in the classroom is critical to student achievement. Classroom discourse is facilitated through teacher questions.

Slide 30

Questioning

What does the research say?

- Nearly 75% of the time that teachers asked questions the questions were at the recall or recitation level with little or no follow-up on student responses.

ATM
region of
COCO
Texas
maximizing
Algebra II
performance

A significant amount of questions that teachers ask have nothing to do with content. i.e. Why are you late?

Slide 31

Questioning

What does the research say?

- A combination of lower level and higher level questions is most effective to develop understanding.
- Sequencing of questions is critical.

ATM
region of
COCO
Texas
maximizing
Algebra II
performance

Balance is critical. Sequence does not necessarily mean low rigor to high rigor. A very rigorous question might be asked to stimulate investigation then the rigor of questions might move down and build.

Slide 32

Questioning

What does the research say?

- The clarity and specificity with which teachers phrase their questions influenced the clarity, specificity, and correspondence of the students' answer.

ATM
region of
COCO
Texas
maximizing
Algebra II
performance

Ask quality questions and get quality responses.

Slide 33

Questioning

So what do we do now?

- Plan key questions to provide lesson structure and direction
- Phrase questions clearly and specifically
- Adapt questions to student ability level
- Ask questions logically and sequentially
- Ask questions at a variety of cognitive levels

The key is planning. In addition to planning questions teachers should plan for student responses.

Slide 34

The 5E Model: A Vessel to Contain Good Mathematics

MAP utilizes the 5E instructional model, an inquiry-based model of instruction. The 5E lesson structure offers well-timed opportunities to incorporate instructional strategies, such as cooperative learning, vocabulary development, and questioning techniques, that have been proven to impact student achievement.

A large body of research exists about different types of instructional cycles and their effectiveness. The particular model that we are following today is called the Five E Instructional Model.

Slide 35

The 5E Model: A Vessel to Contain Good Mathematics

The 5E instructional model encourages a consistent structure for learning with characteristic activities during each phase, so that students can monitor the learning process and gain metacognitive knowledge.

Slide 36

What is the 5E Model?

Five distinct phases of instruction

Engage Phase

Description: Introductory lessons should stimulate curiosity and activate prior student knowledge. The activity should be a problem or an event that raises questions and motivates students to discover more about the concept.

ATM
region of
Cultural Education
Texas
maximizing
Algebra II
performance
Video

In this model, Stage 1 is appropriately referred to as “Engage”.

Emphasize:

During the Engage phase, are teachers looking for students to have the “right answer”? NO

Are teachers explaining new concepts to students or giving lectures? NO

Are teachers providing new vocabulary terms and definitions? NO

Slide 37

Explore Phase

Description: Students need the opportunity to actively explore the concept in a hands-on activity. This establishes a commonly shared classroom experience and allows students to share ideas about the concept.

ATM
region of
Cultural Education
Texas
maximizing
Algebra II
performance
Video

Emphasize:

During the Explore phase, are teachers looking for students to have the “right answer”? NO

During the Explore phase, who appears to be doing the most work? The students

Are teachers explaining new concepts to students or giving lectures? NO

Are teachers providing new vocabulary terms and definitions? NO

Slide 38

Explain Phase

Description: Teachers use questioning strategies to lead students' discussion of information discovered during the Explore stage. Teachers introduce new terms and explanations at appropriate times during the discussion.

ATM
region of
Cultural Education
Texas
maximizing
Algebra II
performance
Video

Emphasize:

Are teachers explaining new concepts to students or giving lectures? Only after hearing from students first

Are teachers providing new vocabulary terms and definitions? YES

Slide 39

Elaborate Phase

Description: Students are encouraged to apply, extend, and enhance the new concept and related terms during interaction with the teacher and other students.

ATM
region of
Texas
maximizing
Algebra II
performance
Video

Emphasize:

During the Elaborate phase, are teachers introducing students to new concepts and processes?

NO

Are teachers explaining new concepts to students or giving lectures?

NO

Are teachers providing new vocabulary terms and definitions?

NO

Slide 40

Evaluate Phase

Description: Students demonstrate their understanding of the concept.

ATM
region of
Texas
maximizing
Algebra II
performance
Video

Evaluation takes place

throughout the phases of the 5E lessons in the form of questions and assessments. The evaluate phase itself is a performance assessment requiring significant thinking and problem-solving on the part of students.

Slide 41

Administrator's Role

- Set expectations
- Inspect what is expected
- Value and facilitate
- Stoke the sense of urgency
- Communicate the data
- Find and make the time
- Do what you value

ATM
region of
Texas
maximizing
Algebra II
performance
Schmider

If implementation is desired administrators must

communicate with teachers.

Data is a powerful tool to drive change.

Slide 42

Leadership is as Leadership Does!

- Utilize short walk-throughs
- Utilize reflective questioning

ATM
region of
Central Indiana
Indiana Department of Education
maximizing
Algebra II
performance

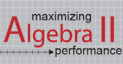

The short walk-through is an excellent tool to demonstrate the importance of implementation. While they do require time the potential impact on instruction can be extremely valuable. Administrators can use coaching techniques to manage staff more effectively.

Reflective questions do not require an answer. Their purpose is to stimulate thought on the part of the teacher.

Maximizing Algebra II Performance

Administrator Overview

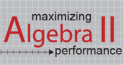

What is the Maximizing Algebra II Performance (MAP) Training?

Part of the Texas Math Initiative

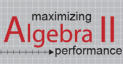

- **Also includes these trainings:**
 - Mathematics TEKS Connections (MTC)
 - Mathematics TEKS Connections – Geometry (MTC-Geometry)
 - Teaching Mathematics TEKS through Technology (TMT³)
 - Mathematics TEKS Refinements (MTR)
 - Texas State University System Mathematics for English Language Learners (TSUSMELL)

MAP

Maximizing Algebra II Performance (MAP) uses a functions-based approach to the teaching and learning of the Algebra II TEKS. This professional development extends and enriches current instructional practice in order to facilitate robust learning for all students enrolled in Algebra II. Content-based and instruction-based connections will be explored within a strand and between strands of the TEKS. The professional development includes:

MAP

- learning opportunities that promote conceptual understanding and procedural fluency related to functions outlined in the Algebra 2 TEKS
- tools to connect multiple representations of parent functions to build and solidify student understanding of functions

MAP

- intentional questioning strategies to facilitate modeling, organizing, and generalizing understandings related to mathematical and real-world contexts
- classroom-ready lessons that utilize the 5E instructional model to the Algebra 2 TEKS explored in the professional development
